EDUCATION

Stanford University

B.S. Mechanical Engineering

Minor in Computer Science

Graduate Level Coursework:

CS229: Intro to Robotics, ME210: Intro to Mechatronics

Expected Graduation 2029

RELEVANT EXPERIENCE

ARMLab Researcher - Assistive Robotics and Manipulation

Apr 2026 - Present

- Designed an electromagnetic linear actuator for a robotic muscle for tendon-driven robot hands with full position control (using PID) and force control (using PWM)
- Coded multiple ROS2 environments and a force simulation to determine electromagnet spacing
- Designed an original sensor that calculates the position of the actuator by measuring inductance
- Helped submit a patent of our current prototype
- Worked 40hr weeks for 10 weeks over the summer and continuing in the lab during the school year

Stanford Student Space Institute - Europa Team Colead

Sep 2025 - Present

- Managed a team of ~10 people to design a low-cost, open source benthic lander that collects sediment, water, DNA, and video from ocean trench depths of over 9000m
- Lead the mechanical design, which includes a custom soil scoop, nitskin tube, and a pressure-powered DNA collector
- Completed multiple successful tests in the SF and in Monterey Bay in collaboration with Monterey Bay Aquarium Research Institute (MBARI)

Stanford Student Space Institute - IREC Team, Payload Subteam

Sep 2025 - Present

- Redesigned an L3 rocket payload that synthesizes crystals in microgravity for pharmaceutical testing to compete in the International Rocket Engineering Competition (IREC)
- Engineered a rigid, compact payload that fit within a 1U cubesat utilizing a combination of laser cut metal and 3D printed interiors

PROJECTS

Modular Robot Dog

[Link to project](#)

- Designed a custom QDD actuator with a 5:1 ratio to power a full-scale 12DoF robot dog
- Created a modular system of actuators to create almost any limbed robot
- Used system to design 7DoF Robot arms, multiple sizes of robot dog, and a mimic of JPLs RoboSimian

SKILLS

Engineering CAD, CAM, FEA (Fusion 360, Onshape)

Fabrication CNC machining, 3D printing, general workshop, woodworking, laser cutting, carbon fiber/composite epoxy layups

Programming Python, JavaScript, Java, C, C++, ROS2
